

Solution Requirements: Laptop Request Catalog Item

Date	31/10/2025
Team ID	NM2025TMID07125
Project Name	Laptop Request catalog item
Maximum Marks	4 marks

This content details the specific **Functional** and **Non-functional Requirements** necessary for the successful design and deployment of the dynamic Service Catalog item.

Functional Requirements (FRs)

Functional requirements define what the system **must do** to meet the user stories and solve the core problem (manual, non-dynamic form).

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Core Item & Data Collection	The system must display the " Laptop Request Catalog Item " with all defined variables for user input.
FR-2	Automated Data Pre-fill	The system must automatically populate the ' Requested For ' Manager and ' Department ' fields from the user's profile data.

FR-3	Dynamic Field Logic (UI Policy)	The system must enforce dynamic field display: The Justification field is made mandatory and visible only when a high-cost laptop model is selected.
FR-4	Form Reset (UI Action)	The system must execute a "Reset Form" UI Action (button) that clears all entered variables back to their default state when clicked.
FR-5	Submission & Fulfillment	Successful form submission must generate a Request (REQ) and a Request Item (RITM) , accurately mapping all collected variables to the RITM record.

Non-functional Requirements (NFRs)

Non-functional requirements describe **how well** the system must perform a function, focusing on quality attributes like speed, usability, and maintainability.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability (UX)	The form layout and field instructions must be intuitive and easy for an employee to complete in

		under 3 minutes.
NFR-2	Performance	The execution of Catalog UI Policies (dynamic field visibility) and Client Scripts (auto-population) must execute instantly, without noticeable delay.
NFR-3	Reliability	The auto-population of user data (FR-2) must be 100% reliable and must use current user profile data.
NFR-4	Security	Only authenticated and authorized users should be able to view and submit the Service Catalog Item.
NFR-5	Maintainability	All custom logic (UI Policies and Client Scripts) must be clearly commented and captured within a single Update Set for easy maintenance and deployment.
